

Vergleich: Säuren Wasser Laugen

The diagram illustrates a laboratory setup for comparing acids and bases. At the top, three beakers are positioned above a central funnel. Below the funnel is a large container filled with water molecules (represented by two small circles) and ions (represented by larger circles with '+' and '-' signs). This central container is connected to a grid of 14 test tubes. Below the test tubes are three beakers, which are connected to the test tubes by lines, suggesting a process of pouring or testing the contents.
